

Custom Genomes (Genomes not in IGB)

IGB supports many species and genome versions, not just the species shown on the start screen. To check whether a genome is available in IGB, click the **Current Sequence** tab and use the **Species** and **Genome Version** menus to look for your genome of interest.

However, if your genome is not available, you can still use IGB. Here's how:

How to open a custom genome

1. Select **File > Open Genome from File...** (or click the DNA icon in the **Toolbar**.)
2. Select a sequence file to use as the reference genome (fasta or 2bit format).
3. Enter **Optional** details:
 - a. Enter Genus name
 - b. Enter the Species name
 - c. Enter the Variety as appropriate (strain/cultivar/accession)
 - d. Choose the Month of the genome release date
 - e. Enter the Year in YYYY format.
4. Click **OK** and wait for the genome to load.
5. Open data files as usual. And to view sequence, zoom in and click **Load Sequence**.

Open Genome from File

Reference Sequence * Enter URL or choose a local file Browse...

Genome Details (all fields are optional)

Genus (optional)	Enter genus
Species (optional)	Enter species
Variety (optional)	Enter strain/cultivar/accession
Genome release date (optional)	Month ▼ Enter year

* Required field
If you choose to include the optional details, IGB will display the details in the species and genome menus.

OK Cancel

1. Choose reference sequence (2bit is best; fasta is fine.)

2. Enter genome details (optional)

Open Genome from File

Reference Sequence * nome_sequences\Folder\E_coli_Jan_2012\E_coli_Jan_2012.2bit Browse...

Genome Details (all fields are optional)

Genus (optional)	escherichia
Species (optional)	coli
Variety (optional)	k12-MG1655
Genome release date (optional)	January ▼ 2012

* Required field
If you choose to include the optional details, IGB will display the details in the species and genome menus.
